

# A customer in Western PA gave us the following report:

Feeding 100 Holstein cows with an I. H. Rissler **Model V975** Twin Vertical TMR cart

Total batch size: 1500 lbs (with 6" rubber top)

Total baleage per batch: 250 lbs

**No extra time** needed for cutting baleage.

1. Load baleage, augers in high speed;
2. Augers stay in high while loading ground/shelled corn;
3. Start loading haylage, shift augers into low speed;
4. Load corn silage;
5. Finish loading silage, immediately drive over to cows and start feeding.(feed is mixed in the time it takes to drive to the cows)

Total time: From **Start Loading** to **Ready to Load next batch** is **15 minutes**

Nutritionist pulled multiple samples for tests with 100% satisfaction.

This farmer's opinion: If willing to allow 6-12 minutes cutting time, 300-400 lbs quality alfalfa baleage would not be a problem.

We expect to receive many more positive customer testimonials in the future.
